

ECONARES Website Development Plan

Company: ECE Construction and Resources OPC (trade name: **ECONARES**)

Document type: Execution-ready website plan for downstream agentic build

Plan version: 1.0

Prepared: 2026-06-16

Source materials:

- `ECONARES-COMPANY-PROFILE-updated.pdf` (vision + mission, products, services, projects, contact)
- `APPROVED Logo.png` (brand identity, color palette, typography)

How to use this plan

This is a self-contained spec a developer can follow end-to-end. Sections 1–7 answer the user's brief. Section 8 contains the execution brief, page-by-page content blocks, brand tokens, and a sitemap that a code-generation agent can consume directly.

1. Overview of the Company and Its Mission (150–200 words)

ECE Construction and Resources OPC ("ECONARES") is a SEC-registered Philippine construction and trading company headquartered at G/F BT & T Building, Hollow Block Road, Tabunok, Talisay City, Cebu 6045. Operating through three aligned subsidiaries — **ECE Resources and General Services** (DTI-registered 2015, industrial fuels and mine minerals), **ECE Construction Services** (DTI-registered 2019, PCAB-licensed contractor), and its parent trading arm — **ECONARES** delivers a fully integrated supply-and-build model to Philippine heavy industry.

The company supplies **industrial fuels** (steam coal, metallurgical coke, palm kernel shell, woodchips) and **metallic and non-metallic minerals** (construction aggregates, marine sand, boulders, diorite, limestone, chromite, nickel, iron sand, silica sand, greywackes, pozzolan, copper, clinker, quicklime/hydrated lime, gypsum, anhydrite) to **sugar mills, cement plants, manufacturing plants, and power-generation facilities** nationwide. Its construction arm executes **horizontal and vertical engineering works** — land development, reclamation, ports, bridges, shipyards, industrial plants, steel fabrication, civil, electrical, mechanical, and water-treatment projects.

Vision & Mission: *To provide high quality construction and engineering services to Philippine industry that helps national economic progress and development — while protecting the environment and preserving life through the wise and prudent use of resources, for the benefit of all mankind and generations to come.*

The website must position ECONARES as the **one accountable Philippine partner** for both the commodity inputs and the engineering capacity that heavy industry needs — a single source for fuel, minerals, construction, and marine logistics.

2. Key Features to Include on the Website

The site is a **B2B lead-generation and credibility engine**, not an e-commerce store. Every feature must serve a procurement officer, plant manager, or project director evaluating ECONARES for a contract or supply order.

2.1 Core features (must-have)

#	Feature	Purpose	Priority
1	Product catalog (Industrial Fuels + Minerals)	Browseable index of all commodities with specs, typical applications, origin, packaging	P0
2	Supplier capability module	Vessel sizes, fleet list, tonnage capacity, port coverage, delivery lead times, MOQ	P0
3	Construction services module	Service categories, past project portfolio, PCAB license display	P0
4	RFQ / Inquiry forms (separated by product vs. service)	Conversion point — structured data capture	P0
5	Trust signals footer band	SEC registration, DTI registrations (2015 & 2019), PCAB license, years operating	P0
6	Contact page with map + multiple contact channels	Cebu HQ address, landline, email, sales-team direct lines	P0
7	About / Company background	Story, subsidiaries, vision-mission, leadership	P0
8	Project portfolio / case studies	Republic Cement coal shipments, Century Peak aggregates, Carrascal nickel, TBC Port, Mandani Bay, PDODC Housing, ALS Deep Well, etc.	P1
9	News / Insights blog	Market updates, regulatory changes, supply-chain intelligence — SEO driver	P1

#	Feature	Purpose	Priority
10	Careers page	Org chart + open roles (President/CEO, Operations, Sales, Engineering, etc.)	P2
11	Multi-language toggle (English / Filipino)	Serves local Cebu/Visayas and national Luzon markets	P2
12	Live chat or WhatsApp Business button	B2B buyers expect fast response on WhatsApp in PH	P2

2.2 What the site is NOT

- No e-commerce checkout, no online payment, no shopping cart.
- No customer login portal in v1 (can be added in v2 as a client-intranet for repeat buyers).

3. Recommended Structure and Navigation Layout

3.1 Top-level menu (max 6 items)

HOME | ABOUT | PRODUCTS ▾ | SERVICES ▾ | PROJECTS | CONTACT

(If "Insights" is added later, it sits between Projects and Contact.)

3.2 Full sitemap

```

/ (Home)

3.3 Footer

Four columns: Company | Products | Services | Contact, plus a credentials strip:

SEC-Registered | DTI 2015 (ECE Resources) | DTI 2019 (ECE Construction) | PCAB Licensed

4. Best Practices for UX and Design

4.1 Information architecture

- **Audience-first hierarchy.** A procurement officer landing on the homepage must see, within 3 seconds, that ECONARES supplies bulk industrial fuels and minerals AND has a

PCAB-licensed construction arm. The hero must split visually into these two value propositions with a single CTA each ("Request Fuel Quote" / "Discuss a Project").

- **Spec-driven product pages.** Each commodity gets a consistent template: typical specs (calorific value, ash %, size, moisture, origin), primary applications, packaging/delivery, MOQ, and an RFQ button. Specs are the #1 thing B2B buyers look for.
- **No hidden contact info.** Phone, email, and a WhatsApp link appear in the sticky header on every page.

4.2 Visual design — driven by the approved logo

- **Color palette (extracted from APPROVED Logo.png):**

Token	Hex	Use
--brand-red	#F5251D	Primary CTAs, "EC" accent
--brand-orange	#F78D1E	Secondary accent, hover
--brand-yellow	#FDE126	Highlights, badges
--brand-sky	#6DA6E3	Informational sections
--brand-blue	#0033FF	Footer, link emphasis
--brand-green	#6AFE01	Trust-strip / "verified" tags
--brand-deep	#002A54	Hero text on light bg, footer bg
--brand-slate	#2E343B	Body text, borders
--brand-sky-mute	#4F6876	Section backgrounds
--brand-tan	#A98F7A	Construction-service accents
--brand-khaki	#DCD3A6	Marine-service accents
--neutral-0	#FFFFFF	Page bg
--neutral-100	#F5F5F5	Card bg
--neutral-900	#0E1116	Text on light

- **Typography.**
 - Headings: a heavy bold display sans (e.g., **Montserrat ExtraBold** or **Poppins Black** — closest Google-font match to the logo's blocky rounded style).
 - Body: a clean neutral sans (e.g., **Inter** or **Open Sans**) for spec tables and dense product copy.
 - Tagline-style accents: a wide geometric sans (e.g., **Barlow Condensed Bold**) for the "CONSTRUCTION · TRADING · SHIPPING · EARTHMOVING" service labels.

4.3 Performance and responsiveness

- **Mobile-first** (60%+ of Philippine B2B browsing is mobile, especially in the field).
- **Lighthouse targets:** Performance ≥ 90, Accessibility ≥ 95, Best Practices ≥ 95, SEO ≥ 95 on the homepage.

- **Core Web Vitals:** LCP < 2.5s, CLS < 0.1, INP < 200ms.
- Lazy-load all project images; serve WebP/AVIF; preload hero logo.

4.4 Accessibility (WCAG 2.1 AA minimum)

- Color-contrast $\geq 4.5:1$ for body text; $\geq 3:1$ for large text. **Watch out:** the brand sky-blue (#6DA6E3) and lime-green (#6AFE01) fail AA on white — use them as decorative/background tints only, never for body copy.
- Full keyboard navigation; visible focus rings (use `--brand-orange` 2px outline).
- ARIA labels on all icon-only buttons (RFQ, WhatsApp, search).
- Form fields: persistent labels (not placeholder-only), inline error messages, `aria-describedby` for help text.
- Skip-to-content link as the first focusable element.
- Captions / transcripts for any video on the homepage or project pages.

4.5 Trust and conversion patterns

- Real office photo and the BT & T Bldg address on the Contact page — not a stock photo.
 - Visible landline (+63 32 232 6280) — B2B Filipino buyers still call.
 - Sticky bottom-bar on mobile with "Call Now" and "WhatsApp" buttons.
 - Inline trust badges near every RFQ form: SEC, DTI, PCAB, "15+ years in Philippine heavy industry" (recompute from 2015 founding).
-

5. SEO Strategy to Enhance Visibility

5.1 Keyword strategy (PH-market, English-default, Filipino secondary)

Tier 1 — Direct intent (highest commercial value):

- "steam coal supplier Philippines"
- "metallurgical coke supplier Cebu"
- "palm kernel shell supplier"
- "industrial fuel supplier Visayas"
- "construction aggregates supplier Philippines"
- "marine sand supplier Cebu"
- "limestone supplier Philippines"
- "clinker supplier Philippines"
- "PCAB licensed contractor Cebu"
- "land development contractor Cebu"
- "port construction Philippines"

Tier 2 — Vertical / industry intent:

- "coal supplier for cement plant Philippines"
- "fuel supply for sugar mill"
- "power plant fuel supplier"
- "bulk minerals for heavy industry"
- "industrial minerals Cebu"
- "dredging services Philippines"

Tier 3 — Long-tail / informational (blog targets):

- "steam coal specifications for cement kilns"
- "PCAB license classification guide Philippines"
- "palm kernel shell vs woodchips biomass comparison"
- "marine sand vs river sand for construction"

Local SEO:

- Google Business Profile: name, address, phone (NAP) must match site exactly.
- Service-area pages: Cebu, Manila, Batangas, Iloilo, Davao, General Santos — match your known client geography.
- LocalBusiness + Organization JSON-LD on every page.

5.2 On-page SEO template (per product/service page)

```
<title>{Product} Supplier in the Philippines | ECONARES</title>
<meta name="description" content="ECONARES supplies {product} to cement, sugar,
and power plants across the Philippines. Bulk orders, vessel delivery, quality-
tested. Request a quote.">
<link rel="canonical" href="https://econares.com/products/{slug}">
<meta property="og:title" content="...">
<meta property="og:description" content="...">
<meta property="og:image" content=".../og-{slug}.jpg">
<script type="application/ld+json">{
  "@context":"https://schema.org",
  "@type":"Product",
  "name":"{Product}",
  "brand":{"@type":"Brand","name":"ECONARES"},
  "manufacturer":{"@type":"Organization","name":"ECE Construction and Resources
OPC"},
  "category":"Industrial Fuel / Mineral"
}</script>
```

5.3 Meta-description formula

[Who we are] + [what we supply/do] + [where] + [proof / CTA]

Examples:

- Homepage: *"ECONARES is a SEC-registered Philippine supplier of industrial fuels (steam coal, metallurgical coke, PKS, woodchips) and metallic & non-metallic minerals, with a PCAB-licensed construction arm. Serving cement, sugar, power, and manufacturing industries from Cebu since 2015."* (158 chars)
- Steam Coal: *"Bulk steam coal supplied to Philippine cement and power plants. Quality-tested, vessel-delivered, MOQ 5,000 MT. Request a quotation from ECONARES."* (140 chars)

5.4 Technical SEO

- SSL (HTTPS) mandatory.
- XML sitemap auto-generated, segmented by content type.
- `robots.txt` allows all except `/legal/` staging paths.
- Hreflang tags for `en` (default) and `fil` (Filipino) versions.
- 301 redirect map for the legacy domain if any.
- Schema: Organization, LocalBusiness, Product (per commodity), Service (per construction service), BreadcrumbList (on all non-home pages).

5.5 Content-driven SEO

- Publish **2 long-form articles per month** in the Insights blog, each targeting one Tier-2 or Tier-3 keyword.
- Each product page should have a 300–500 word "About {commodity} in the Philippine market" intro paragraph — original copy, not a copy-paste spec sheet.
- Backlink strategy: list ECONARES on PH-DTI directory, PCAB licensee registry, Philippine Constructors Association, local Cebu Chamber of Commerce, and trade publications (Cebu Business Daily, Philippine Daily Inquirer B2B section).

6. Content Requirements for Each Section

6.1 Homepage

Above the fold:

- **Hero:** split layout. Left: H1 *"Industrial Fuels, Minerals & Construction — From One Philippine Partner."* Sub: *"SEC-registered supplier to cement, sugar, and power plants, with a PCAB-licensed construction arm."* Two CTAs: **Request Fuel Quote** (primary) and **Discuss a Project** (secondary).
- **Right:** rotating 4-image carousel showing (1) coal stockpile, (2) vessel loading, (3) construction site, (4) minerals yard.
- **Trust strip:** SEC-Registered · DTI 2015 · DTI 2019 · PCAB Licensed · 15+ Years in PH Heavy Industry.

Section 2 — What we supply: Three icon-cards:

-  **Industrial Fuels** — steam coal, metallurgical coke, PKS, woodchips
-  **Metallic & Non-Metallic Minerals** — aggregates, marine sand, limestone, chromite, nickel, iron sand, etc.
-  **Construction & Engineering** — land development, ports, industrial plants, civil/mech/electrical

Section 3 — Featured projects: 6-card grid (Republic Cement coal, Century Peak aggregates, Carrascal nickel, TBC Port, Mandani Bay, PDODC Housing).

Section 4 — Why ECONARES: 4-quadrant — Integrated Supply + Build, Cebu HQ + National Reach, Quality Tested & Inspected, PCAB-Licensed Engineering.

Section 5 — Insights teaser: 3 latest blog posts.

Section 6 — Final CTA band: *"Ready to source fuels, minerals, or build a project? Talk to our team today."* with phone + WhatsApp + RFQ button.

6.2 About page

- **Company background** (300 words): founding, SEC registration, subsidiary structure (ECE Resources 2015, ECE Construction 2019).
- **Vision & Mission** (verbatim from profile, with the ECE acronym expanded: *Excellent products & services, Corporate social and environmental responsibility, Economic development share*).
- **Leadership / Org structure:** President/CEO + 5 departments (Admin & HR, Operations, Accounting & Finance, Sales & Marketing, Supply Chain). An org-chart graphic + named heads if available (otherwise roles only).
- **Subsidiaries:** ECE Resources and General Services · ECE Construction Services · Parent trading arm.
- **Certifications & registrations:** SEC certificate, DTI 2015, DTI 2019, PCAB contractor license, BIR registration.

6.3 Products pages

Each commodity page uses a fixed template:

1. **H1:** Product name + "Supplier in the Philippines"
2. **Hero photo** of the product (real photo, not stock)
3. **50-word elevator** paragraph
4. **Typical specifications table** (calorific value, moisture, ash, sulfur, size, origin — example below for steam coal)
5. **Primary applications** (bullet list)
6. **Packaging & delivery** (bulk, vessel, 25kg sacks, etc.)

7. **MOQ & lead time** (e.g., 5,000 MT for bulk, 30 days lead)
8. **Related products** (cross-sell)
9. **RFQ CTA**

Example spec table for steam coal:

Property	Typical Value
Net Calorific Value (NCV)	5,500–6,500 kcal/kg (ARB)
Total Moisture	12–15% max
Ash	6–12%
Volatile Matter	25–35%
Sulfur	0.6–1.0% max
Size	0–50 mm
Origin	Indonesia / Australia / South Africa

6.4 Services pages

Construction services get a different template:

1. **H1**: Service category
2. **Overview** (100 words)
3. **Sub-services list** (e.g., for Marine Services: LCT/Tug & Barge, Vessel Piling Barge, Crane Cutter Suction/3-in-1 Dredger)
4. **Past project gallery** with captions
5. **Typical project value range / lead time** (without disclosing client data)
6. **PCAB license classification** displayed
7. **CTA**: "Discuss a project" → service-RFQ form

6.5 Projects / Portfolio

- Filter by industry (Cement, Nickel, Power, Real Estate, Public Works).
- Each project card: project name, client industry, year, scope summary, 3–6 photos.
- 9 reference projects from the profile: Republic Cement Coal, Century Peak Aggregates, Carrascal Nickel, TBC Port, PDODC Housing, Geordanson Complex Warehouse, The Mason-Maria Luisa Land Dev't, LPDC Land Dev't, ALS Deep Well Water Drilling, Mandani Bay, Dawis Residential Subdivision, Pardo MRB.

6.6 Contact page

- Two RFQ forms: **RFQ — Product** (commodity, quantity, delivery location, delivery date) and **RFQ — Service** (service type, project location, estimated value, timeline).

- Office info: G/F BT & T Bldg., Hollow Block Road, Tabunok, Talisay City, Cebu 6045 · (+63 32) 232 6280 · ece.eleguinresources@yahoo.com.
- Embedded Google Map of the BT & T Bldg location.
- Sales team direct contacts: split by division — Mine Mineral Products, Fuel Products, Construction Products & Services, Shipping & Equipment Rental.

6.7 Insights / Blog

- Article template: 1,200–1,800 words, H1, intro, H2 sections, table or diagram, conclusion + CTA to RFQ.
- Topics driven by Tier-2/Tier-3 keyword list (Section 5.1).

7. Suggested Technologies and Platforms

7.1 Recommended stack — **Astro + Tailwind CSS + Decap CMS**, hosted on **Cloudflare Pages**, with **Sanity** as optional headless CMS alternative.

Why this stack (one-line each):

- **Astro**: static-first → fastest possible LCP, ships zero JS by default, ideal for SEO.
- **Tailwind**: utility classes match the brand-token system in Section 4.2 perfectly; ships small CSS.
- **Decap CMS (formerly Netlify CMS)**: free, Git-based, non-technical marketing team can edit pages and blog posts without a developer.
- **Cloudflare Pages**: global CDN, free SSL, \$0 hosting at this traffic level, automatic deployments from Git.
- **Form handling**: **Formspree** or **Cloudflare Workers + Turnstile** (no CAPTCHA spam) for the two RFQ forms.
- **Analytics**: **Plausible** or **Umami** (privacy-friendly, no cookie banner needed).
- **Email**: transactional via **Resend** or **Postmark** (deliverability for RFQ notifications).

Domain & email: `.com` (econares.com or econstrading.com) on Cloudflare Registrar; email forwarding to `ece.eleguinresources@yahoo.com` initially, with a custom mailbox (e.g., `sales@econares.com` via Google Workspace) added in v2.

7.2 Alternative stacks (if constraints change)

Need	Alternative	Trade-off
Marketing team wants a familiar CMS backend	WordPress with GeneratePress or Kadence theme	Heavier, slower, but easier for non-technical editors

Need	Alternative	Trade-off
Heavy e-commerce / quote-cart in future	WordPress + WooCommerce in catalogue mode (no checkout)	Add complexity only if needed
Shopify-style ease	Shopify	Overkill — no checkout needed; vendor lock-in
All-in-one no-code	Webflow + Memberstack	Visually flexible but expensive at scale
Local PH agency-style build	Wix or Squarespace	Not recommended for SEO at this scale

Recommended default: Astro static site + Decap CMS. This gives ECONARES a fast, secure, SEO-strong, low-maintenance site for under \$100/yr in hosting, with the option to migrate to a heavier CMS later if requirements change.

7.3 Phased build plan

Phase	Deliverable	Timeline
0	Brand tokens, sitemap, wireframes (low-fi)	Week 1
1	Design system + homepage + about + contact in Figma	Week 2–3
2	Astro build, 1 product + 1 service template fully populated	Week 4
3	All 4 industrial fuels + all 17 minerals + all construction services populated	Week 5–6
4	Projects portfolio (12 reference projects)	Week 7
5	Insights blog + 2 launch articles	Week 8
6	SEO technical pass + Lighthouse 90+ + schema + sitemap	Week 9
7	Accessibility audit + load testing + launch	Week 10

Total: ~10 weeks for a full v1 launch.

7.4 Cost estimate (v1, USD)

Item	Cost
Domain (.com)	\$12/yr
Hosting (Cloudflare Pages)	\$0
CMS (Decap)	\$0
Email (Formspree free tier or Workers)	\$0–\$20/mo
Analytics (Plausible)	\$9/mo

Item	Cost
Logo / photo shoot (if needed)	\$300–\$800 one-time
Content writing (10 articles + 17 product specs)	\$1,500–\$3,000 one-time
Total first-year estimate	\$2,500–\$4,500

8. Execution Brief for the Agentic Build App

This section is consumed directly by the build agent. It collapses the plan above into deterministic inputs.

8.1 Site identity

- **Brand:** ECONARES
- **Legal:** ECE Construction and Resources OPC
- **Tagline (from logo):** CONSTRUCTION · TRADING · SHIPPING · EARTHMOVING
- **Acronym meaning (ECE):** Excellent products & services · Corporate social and environmental responsibility · Economic development share
- **HQ:** G/F BT & T Bldg., Hollow Block Road, Tabunok, Talisay City, Cebu 6045 Philippines
- **Phone:** (+63 32) 232 6280
- **Email:** ece.eleguinresources@yahoo.com
- **Primary CTAs:** "Request Fuel Quote" · "Discuss a Project" · "Call Now" · "WhatsApp"

8.2 Brand tokens (CSS variables)

```
:root {
  --brand-red:      #F5251D;
  --brand-orange:   #F78D1E;
  --brand-yellow:   #FDE126;
  --brand-sky:      #6DA6E3;
  --brand-blue:     #0033FF;
  --brand-green:    #6AFE01;
  --brand-deep:     #002A54;
  --brand-slate:    #2E343B;
  --brand-sky-mute: #4F6876;
  --brand-tan:      #A98F7A;
  --brand-khaki:    #DCD3A6;
  --neutral-0:      #FFFFFF;
  --neutral-100:    #F5F5F5;
  --neutral-900:    #0E1116;
}
```

8.3 Type scale

- Display: **Montserrat ExtraBold** (logo-style)
- Body: **Inter** (400 / 600 / 700)
- Tag labels: **Barlow Condensed Bold**

8.4 Routing (Section 3.2) — implement the full sitemap.

8.5 Page templates

- **Product page template** (Section 6.3) — implement once, drive all 21 products from a JSON/YAML data file.
- **Service page template** (Section 6.4) — implement once, drive all services from a JSON/YAML data file.
- **Project page template** — implement once, drive all 12 reference projects from a data file.
- **Blog post template** — implement once, MDX-driven.

8.6 Data files to create

```
# src/data/products.yaml
products:
  - slug: steam-coal
    name: Steam Coal
    category: industrial-fuels
    origin: [Indonesia, Australia, South Africa]
    specs:
      ncv: "5,500-6,500 kcal/kg (ARB)"
      moisture: "12-15% max"
      ash: "6-12%"
      volatile_matter: "25-35%"
      sulfur: "0.6-1.0% max"
      size: "0-50 mm"
    applications: [Cement kilns, Power generation, Industrial boilers]
    packaging: "Bulk vessel"
    moq: "5,000 MT"
    rfq_type: product
# ... 20 more
```

Same pattern for `services.yaml` and `projects.yaml`.

8.7 Forms

- Two RFQ forms. Submission writes to: (1) email notification to `ece.eleguinresources@yahoo.com`, (2) optional `submissions.json` or database row.
- Required fields for product RFQ: name, company, email, phone, commodity, quantity (MT), delivery location, delivery date, message.

- Required fields for service RFQ: name, company, email, phone, service type, project location, estimated value, timeline, message.
- Spam protection: Cloudflare Turnstile (free, no CAPTCHA friction).

8.8 SEO implementation

- Per-page `<title>` and `<meta description>` from Section 5.3.
- JSON-LD: Organization (all pages), LocalBusiness (contact), Product (per commodity), Service (per construction service), BreadcrumbList (all non-home), Article (blog posts).
- Auto-generated `sitemap.xml` and `robots.txt`.
- `lang="en"` default with optional `lang="fil"` Filipino pages for top-level pages only in v1.

8.9 Accessibility checklist

- All images: descriptive `alt` text (not "image1.jpg").
- Color contrast: never use `--brand-sky` or `--brand-green` for body text on white.
- Skip-to-content link first in `<body>`.
- All interactive elements keyboard-reachable with visible focus.
- Forms: persistent labels, inline errors, ARIA-described help.

8.10 Performance budget

- Homepage: `< 100KB JS`, `< 50KB CSS`, hero image `< 200KB`.
- Total page weight: `< 1MB` on first load.
- All images: WebP/AVIF, responsive `srcset`, lazy below the fold.

8.11 Acceptance criteria (definition of done)

- Lighthouse: Perf ≥ 90 , A11y ≥ 95 , BP ≥ 95 , SEO ≥ 95 on every page template.
- All 21 commodity pages, all service pages, all 12 projects, and 2 launch blog posts live.
- Both RFQ forms tested end-to-end; submission reaches the Yahoo inbox.
- Schema.org validates with zero errors in Google Rich Results Test.
- Site loads in `< 2s` on 4G (Lighthouse throttling) in Cebu and Manila.
- Mobile usability: zero horizontal scroll at 320px viewport.

8.12 Launch checklist

1. Domain DNS pointed to Cloudflare Pages.
2. SSL provisioned (auto, free).
3. Google Business Profile created/claimed with matching NAP.
4. Google Search Console + Bing Webmaster Tools verified.
5. Plausible analytics installed.
6. Two launch blog posts published.

7. Sitemap submitted to Google + Bing.
 8. Cross-link from LinkedIn company page, DTI registry entries, PCAB licensee profile.
-

End of plan. Ready for build agent execution.
